

# Company

## Company Profile

ADCOAT CO., LTD. manufactures and sells for "adpack" VCI paper that has been used by major steel companies, automobile companies, blade companies, etc. for more than 50 years. This page provides information about our company and downloaded documents.

## Management Philosophy

"Sanpoyoshi", the old management philosophy, has been carried out by Japanese merchants, especially in Shiga Prefecture, Central Japan. as our Corporate Social Responsibility.

## Greeting

ADCOAT CO., LTD. was started and established in 1968 at Higashi-Osaka City, famous for "Monozukuri" (Products Manufacturing). VCI\* paper (anti-corrosion paper) produced by our company, has been widely applied among the major steel mills, car manufacturers and blade producers etc. since 50 years ago.

However, the visibility with the public is very low, because our products have been mainly used as their export packaging. The climate at high temperature & high humidity in Asia including Japan causes big trouble in the form of rusting. We do hope "adpack", VCI\* paper (anti-corrosion paper) can be easily helpful to protect from rusting for everybody. Many rules and regulations have been issued like REACH and RoHS etc. for various chemicals.

ADCOAT shall try our best to cope with the rules of chemicals.

Thank you very much for visiting our homepages today. \* VCI = Volatile Corrosion Inhibitor.

(Mr)- President Goto Motoshi
